#### ERP System — Microservices Architecture

**Repository:** [github.com/chaniji/ERP](https://github.com/chaniji/ERP)

- Designed and built a production-grade ERP backend with 6 microservices (Java + Go): Auth, Employee, Inventory, Payroll, Report, and Notification services.
- Auth Service: Spring Security, JWT token authentication, Redis caching. Employee (PostgreSQL) & Inventory (MongoDB) via Spring Data JPA with full CRUD.
- Payroll Service (MySQL), GraphQL-powered Report Service, and Go/Gin Notification Service as a Kafka consumer enabling polyglot architecture.
- Implemented Resilience4j Circuit Breaker, Spring Cloud API Gateway, Eureka Service Discovery, and centralized Config Server.
- Async event-driven communication via Apache Kafka; all APIs documented with OpenAPI/Swagger; deployed on Kubernetes with Jenkins CI/CD pipeline.
